9. All structural walls to be # 2 Southern Yellow Pine @ 16" o.c.
10. All girders shall have a minimum of 3-2x4 studs placed directly under the girder and double plates.
11. Pre-manufactured roof trusses to be designed in accordance with the last test TPI design requirements. The truss manufactured is responsible to furnish all reaction loads for dead loads, live loads, and wind loads. Manufacturer to submit truss layout and details signed and by Florida register Engineer.
12. Garage door, windows, and other exterior doors shall withstand the specified wind velocity. Doors and windows manufacturers shall submit data specifying required capacities. These elements shall comply with SBC wind load requirements.
13. All exterior concrete block walls are designed as shear walls or shear wall segments with Dur-a-wall reinforcement every other block as the per segments with Dur-a-wall reinforcement every other block as the per requirements of the National Concrete Masonry Institute.
14. All openings greater than 6 feet to have 1#5 rod on each side of the opening and filled with grout. Openings grater than 12 feet to have 2#5 rods on each side of opening.
15. Contractor to verify all dimensions and conditions in the filled.
16. Any changes to sealed drawings must be approved by the Consulting Engineer or Architect.
17. A foundation survey shall be performed and a copy of the survey shall be on the site for the building inspectors use. Or, all property markers shall be exposed and a string stretched from marker to marker to verify requires setbacks.
18. All Plumbing, Electrical and Mechanical roughens must be complete, inspected and approved before requesting the framing inspection.
19. Provide AFCI'S (arc-fault circuit interrupters in all dwelling unit bedrooms per NEC . article 210-12.

Termite Protection / SECTION R318

R318.1 Termite protection shall be provide by registered termiticides, including soil applied pesticides, baiting systems and pesticides applied to wood, or other approved methods of termite protection labeled for a use as a preventative treatment to new construction. See Section 202,Registered termiticide. Upon the completion of the application of the termite treatment, a Certification of Compliance shall be issued to the Building Department by the licensed pest control company that contains the following statement,"The building has received a complete treatment by the prevention of subterranean termites. Treatment is in accordance with the rules and laws established by the Florida Department of Agriculture and consumer Service.

R318.1.1 If soil treatment is used for subterranean termite protection, the initial chemical soil treatment inside the foundation perimeter shall be done after all excavation, backfilling and compaction is completed.

R318.1.2. If soil treatment is used for subterranean termite protection, soil area disturbed after initial chemical soil treatment shall be retreated with a chemical soil treatment, including spaces boxed or formed.

R318.1.3. If soil treatment is used for subterranean termite protection, space in concrete floors boxes out or formed for the subsequent installation of plumbing traps,drains or any other purpose shall be created by using plastic or metal permanently place forms of sufficient depth to eliminate any planned soil disturbance after initial chemical soil treatment.

R318.1.4 If soil treatment is used for subterranean termite protection, chemically treated soil shall be protected with a minimum 6 mil vapor retarder to protect against rainfall dilution. If rainfall occurs before vapor retarder placement, retreatment is required. Any work, including placement of reinforcing steel, done after chemical treatment until the concrete floor is poured, shall be done in such manner as to avoid penetrating or disturbing treated soil.

R318.1.5. If soil treatment is used for subterranean termite protection,concrete overpour or mortar accumulated along the exterior foundation perimeter shall be removed prior to exterior chemical soil treatment, to enhance vertical penetration to the chemicals.

R318.1.6. If soil treatment is used for subterranean termite protection, chemical soil treatments shall also be applied under all exterior concrete or grade within 1 foot (305mm.) of the the primary structure sidewalls. Also, a vertical chemical barrier shall be applied promptly after construction is completed, including initial landscaping and irrigation/sprinkler installation. Any soil disturbed after the chemical vertical barrier is applied shall be promptly retreated.

R318.1.7 If a registered termiticide formulated and registered as a bait system is used for subterranean termite prevention, Section R318.1.1 thorough Section R318.1.6. do not applied, however, a signed contract assuring the installation, maintenance and monitoring of the baiting system that is in compliance with the requirements of chapter 482 Florida Statues, shall be provided to the building official prior to the pouring of the slab, and the system must be installed prior to final building approval. If the baiting system directions for use required a monitoring phase prior to installation of the pesticide active ingredient, the installation of the monitoring phase components shall be deemed to constitute installation of the system.

R318.1.8 If a registered termiticide formulated and registered as a wood treatment is used for subterranean termite prevention. Sections R318.1.1 through R318.1.6. do not apply. Application of the wood treatment termiticide shall be as required by label directions for used, and must be completed prior to final building approval.

R318.2 PENETRATION. Protective sleeves around piping penetrating concrete slab-on-grade floors shall not be of cellulose-containing materials. If soil treatment is used for subterranean termite protection, the sleeve shall have a maximum wall thickness of 0.010 inch (0.25mm) and to be sealed with the slab using a non corrosive clamping device to eliminate the annular space between the pipe and the sleeve. No termiticides shall be applied inside the sleeve.

R318.3 CLEANING. Cells and cavities in masonry units and air gaps between brick, stone or masonry veneers and the structure shall be cleaned of all non preservative-treated or non-naturally durable wood, or other cellulose-containing material prior concrete placement.
Exception: Inorganic material manufactured for closing cells in foundation concrete masonry unit construction or clean earth fill placed in concrete masonry unit voids below slab level before termite is performed.

R318.4 CONCRETE BEARING LEDGE. Bricks, stone, or other veneer shall be supported by a concrete bearing ledge at least equal to the total thickness of the brick, stone, or other veneer, which is poured integrally with the concrete foundation. No supplemental concrete foundation pours which will create a hidden cold joint shall be used without supplemental treatment in the foundation unless there is an approved physical barrier. An approved physical barrier shall also be installed from below the wall sill plate or first block course horizontally to embed in a mortal joint. If masonry veneer extends below grade, a termite protective treatment must be applied to the cavity created between the veneer and the foundation, in lieu of a physical barrier.
Exception: Veneer supported by a structural member secure to the foundation sidewall in accordance with ACI350/ASCE 5/TMS 402 provide at least a 6 inch(152mm) clear inspection space of the foundation sidewall exterior exists between the veneer and the top of any soil, sod, much or other organic landscaping component, deck, apron,porch, walk or any other work immediately adjacent to adjoining the structure.
R318.5 Protection against decay and termites. Condensate lines, irrigation/sprinkler system risers for spray heads, and roof downspouts shall discharge at least 1 foot(305 mm) away from the structure sidewalk, whether by underground piping, tail extension or splash blocks. Gutters with downspouts are required on all buildings with eaves of less than 6in (152mm) horizontal protection except for gable and rakes or on a roof above anther roof.

HAZARDOUS LOCATIONS

R308.4

THE FOLLOWING SHALL RECONSIDERED SPECIFIC HAZARDOUS LOCATIONS FOR THE PROPOSES OF GLAZING:

1. GLAZING IN ALL FIXED AND OPERABLE PANELS OF SWINGING, SLIDING AND BIFOLD DOORS.
EXCEPTIONS:
1. GLAZED OPENINGS OF A SIZE THROUGH WHICH A 3 INCH DIA SPHERE IS UNABLE TO PASS.
2. DECORATIVE GLAZING.
2. GLAZING IN AN INDIVIDUAL FIXED OR OPERABLE PANEL ADJACENT TO A DOOR WHERE THE NEAREST VERTICAL EDGE IS WITHIN A 24 INCH ARC OF THE DOOR IN A CLOSED POSITION AND WHOSE BOTTOM EDGE IS LESS THAN 60 INCHES ABOVE THE FLOOR OR WALKING SURFACE.
EXCEPTIONS:
1. DECORATIVE GLAZING.
2. WHEN THERE IS AN INTERVENING WALL OR OTHER PERMANENT BARRIER BETWEEN THE DOOR AND THE GLAZING.
3. GLAZING IN WALLS ON THE LATH SIDE OD AND PERPENDICULAR TO THE PLANE OF THE DOOR IN A CLOSER POSITION.
4. GLAZING ADJACENT TO A DOOR WHERE ACCESS THROUGH THE DOOR IS TO A CLOSER OR STORAGE AREA 3 FEET OR LESS IN DEPTH.
5. GLAZING THAT IS ADJACENT TO THE FIXED PANEL OF PATIO DOORS.
3. GLAZING IN AN INDIVIDUAL FIXED OR OPERABLE PANEL THAT MEETS ALL OF THE FALLOWING CONDITIONS:
3.1 THE EXPOSED AREA OF AN INDIVIDUAL PANEL IS LARGER THAN 9 S.F.;AND
3.2 THE BOTTOM EDGE OF THE GLAZING IS LESS THAN 18 INCHES ABOVE THE FLOOR: AND
3.3 THE TOP EDGE OF THE GLAZING IS LESS THAN 36 INCHES ABOVE THE FLOOR: AND
3.4 ONE OR MORE WALKING SURFACE ARE WITHIN 36 IN, MEASURED HORIZONTALLY AND IN A STRAIGHT LINE, OF THE GLAZING
EXCEPTIONS:
1. DECORATIVE GLAZING
2. WHEM A HORIZONTAL RAIL IS INSTALLED ON THE ACCESSIBLE SIDES OF THE GLAZING 34 TO 38 INCHES ABOVE THE WALKING SURFACE.THE RAIL SHALL BE CAPABLE OF WITH STANDING A HORIZONTAL LOAD OF 50 POUNDS PER LINEAR FOOT WITHOUT CONTRCTING THE GLASS AND BE A MINIMUM OF 1 1/2" INCHES IN CROSS SECTIONAL HEIGHT.
3. OUTBOARD IN INSULATING GLASS UNITS AND OTHER MULTIPLE GLAZED PANEL WHEN THE BOTTOM EDGE OF THE GLASS IS 25 FEET OR MORE ABOVE GRADE, A ROOF, WALKING SURFECE OR OTHER HORIZONTAL SURFACE ADJACENT TO THE GLASS EXTERIOR.
4. ALL GLAZING IN RAILINGS REGARDLESS OF AREA OR HEIGHT ABOVE A WALING SURFACE. INCLUDED ARE STRUCTURE BALUSTER PANELS AND NON-STRUCTURAL INFILL PANELS.
5.GLAZING IN ENCLOSURES FOR OR WALLS FACING HOT TUBS, WHIRLPOOLS, SAUNAS ROOMS, BATHTUBS AND SHOWERS WHERE THE BOTTOM EXPOSED EDGE OF THE GLAZING IS LESS THAN 60 IN MEASURED VERTICALLY ABOVE ANY STANDING OR WALKING SURFACE.
EXCEPTIONS:
GLAZING THAT IS MORE THAN 60 IN , MEASURED HORIZONTALLY AND IN A STRAIGHT LINE, FROM THE WATERS EDGED OF A HOT TUB, WHIRLPOOL OR BATHTUB.
6. GLAZING IN WALL AND FENCES ADJACENT TO INDOOR AND OUTDOOR SWIMMING POOLS, HOT TUBS AND SPAS WHERE THE BOTTOM EDGE OF THE GLAZING IS LESS THAN 60 IN ABOVE A WALKING SURFACE AND WITHIN 60 IN, MEASURED HORIZONTALLY AND IN A STRAIGHT LINE, OF THE WATER'S EDGE. THIS SHALL APPLY TO SINGLE GLAZING AND ALL PANELS IN MULTIPLE GLAZING.
7. GLAZING ADJACENT TO STAIRWAYS, LANDINGS AND RAMPS WITHIN 36 IN HORIZONTALLY OF A WALKING SURFACE WHEN THE EXPOSED SURFACE OGF THE GLAZING IS LESS THAN60 IN ABOVE THE PLANE OF THE ADJACENT WALKING SURFACE.
8.GLAZING ADJACENT TO STAIRWAYS WITHIN 60 IN HORIZONTALLY OF THE BOTTOM TREAD OF THE STARIWAY IN ANY DIRECTION WHEN THE EXPOSED SURFACE OF THE GLAZING IS LESS THAT 60 IN ABOVE THE NOSE OF THE TREAD.
EXCEPTIONS:
1.THE SIDE OF THE STAIWAY HAS A GUARDRAIL OR HANDRAIL, INCLUDING BALUSTERS OR IN-FILL PANELS, COMPLYING WITH SECTION R311.7. AND R312. AND THE PLANE OF THE GLASS IN MORE THAN 18 IN FROM THE RAILING : OR
2. WHEN A SOLID WALL OR PANEL EXTENDS FROM THE PLANE OF THE ADJACENTWALKING SURFACE TO 34 IN TO 36 IN ABOVE THE WALKING SURFACE AND THE CONSTRUCTION AT THE TOP OF THAT WALL OR PANEL IS CAPABLE OF WITHSTANDING THE SAME HORIZONTAL LOAD AS A QUARD.
